

A productive member of the team

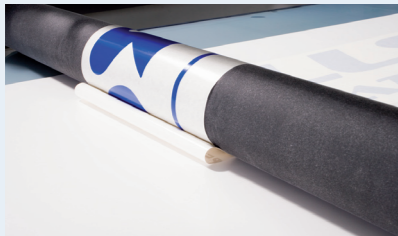

ROLLSROLLER
— FLATBED APPLICATOR —

Fast, easy
and precise

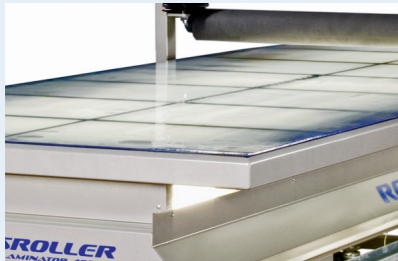

Easy to apply from roll to substrate.

Fast and precise dry and cold application to surface.

Ergonomic working height. RollsRoller is available in height-adjustable version.

All beds with glass tops are lit from below.

Practical side pockets for banner or flex-face application.

RollsRoller helps you save time and money

Many sign makers find that application and lamination are the bottleneck in production – usually because they are still doing the job manually.

RollsRoller changes everything.

All of a sudden it's the printer that can't keep up, even though the applicator requires only one operator. It allows you to increase production without investing in new staff. You eliminate rejects and problems with creases and bubbles. You get a better working environment, since the laminator is also available in a height-adjustable version. And it requires almost zero training to operate RollsRoller quickly and efficiently.

RollsRoller is a profitable addition to your team. It is suitable for applying

plotter text and digital printouts, applicator onto curved signs, banners, flexible sign faces, acrylic plastic and panels. You can also use the machine on material that is up to six centimetres thick.

RollsRoller is designed for dry application. The roller is pressurised pneumatically and clamps the material against the sign. This permits complete control over positioning.

RollsRoller is fully assembled at the factory, so when your applicator is delivered it will improve your profitability from day one.

You can find out which RollsRoller suits your business best on the next page. Welcome to the future of sign making.

Testimonials from customers with successful installations:

"We can now do in a day, what would have taken a week and we can offer improved costs to our customers due to the reduction in labour. We believe the investment will pay itself within 6 months."

**Jonathan Cawthorn,
Jon Signs, England**

"This machine rocks we totally love it. Job that use to take an hour is now completed in 10 minutes."

Prints Plus, USA

"We're constantly looking for ways to improve productivity, and as part of this process we invested in a RollsRoller a few years ago. Now we have fourteen of them. That says a lot about the results we obtained."

**Trond Aamodt,
Eurosilt AS, Norway**

"The RollsRoller has fundamentally changed the way we work. We use digital print machines. Traditionally lamination was done by hand and could not keep up with the print machines. Now print production has doubled, but cannot keep up with the laminator. The RollsRoller puts lamination down far better than by hand."

**Craig Westland,
Centurion Signs, England**

"Each day we produce billboards on different media (PVC, metal sheets, Dibond). Earlier, our classic laminators were not convenient for these types of jobs and required a lot of precautions, many human handlings were necessary. Now thanks to our RollsRoller 605, equipped with 2 beams, we have increased our productivity by 3 compared to traditional application methods."

**Bernard Palanque,
Palma Pub SA, France**

Choosing the right RollsRoller

To ensure that everyone can find the right RollsRoller for their needs, we produce several standard models. The main difference between them is the size of the applicator bed.

You should base your choice of RollsRoller on your needs:

- Which sizes of signs do you mostly produce?

- Which media widths do you use?
- What width do you get from your plotter or printer?
- How do you expect your needs to change in the future?

Based on your answers to these questions you should be able to find the right RollsRoller. Start with the media width and sign width, then the length.

RollsRoller 540 – our most popular model

The model we developed to meet most customer needs is the RollsRoller 540/170 (see photo). It has a length of 540 centimetres and width of 170 centimetres.

If you produce large signs and have plenty of space you may also want to consider the RollsRoller 540/220, 605/170 or 1080/170.

RollsRoller 400 – where space is limited

The RollsRoller 400/170 (see photo) is a shorter version of our most popular model. It is ideal for customers who have limited space.

If you produce smaller signs and do not require such a large working area, there is also the RollsRoller 400/150.

RollsRoller 280 – for smaller signs

Naturally there is little point in buying a larger model than you need. If you produce smaller signs then the RollsRoller 280/145 may be all you need.

A version is also available with a non-illuminated MDF bed instead of the glass bed: the RollsRoller 280 MDF.
