

NAGEL Rimo paper jogger

Convenient and practical

The paper joggers is the perfect complement for your finishing equipment. Paper joggers align sheets after printing or separate them before collating to reduce static charges.

The single-bin paper jogger **Rimo 1** works with a vibrating solenoid and jogs the paper in an upright position. This makes it especially suitable for heavy stock.

Nagel Rimo 1

The **Rimo 4** table top jogger handles formats up to A4, the larger model **Rimo 3** jogs paper in formats up to A3 and is also available with an adjustable stand. Paper can be inserted lengthwise or crosswise into the Rimo 3. The tilt angle of the jogging table and the jogger vibration are infinitely variable.

Nagel Rimo 4

Nagel Rimo 3

The **external large-volume jogger** allows collating of numbered sets. It can be set to straight or criss-cross stacking and is equipped with a height sensor. The collator communicates with the sensor and deactivates the jogger in time to prevent overfilling.

Nagel Jogger
